

## Assignment -2

IoT-Based Industry - Real-Time River Water Quality  
Monitoring and Control System

Python Programming

Assignment Date	22 September,2022
Student Name	MOHAMED ASLAM ABBAS .S.M
Student Roll Number	814719106037
Maximum Marks	2 Marks

### Problem statement:

*Build a python code, Assume u get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.*

### Solution:

#### Python code:

```
import random

import time

while (1):

    temp= random.randint(0, 100)

    humi= random.randint(0, 100)

    thresht=40

    threshh=35

    if temp>thresht :

        print("ALERT!!! Detected temperature is: "+str(temp)+"°C")

    if humi> threshh :

        print("ALERT!!! Detected Humidity is: "+str(humi))
```

```
time.sleep(1)
```

**Output:**

```
temp tst.py - /Users/abdufazel/Downloads/temp tst.py (3.10.5)
import random
import time
while (1):
    temp= random.randint(0, 100)
    humi= random.randint(0, 100)

    thresh=40
    threshh=35

    if temp>thresh :
        print("ALERT!!! Detected temperature is: "+str(temp)+"°C")

    if humi> threshh :
        print("ALERT!!! Detected Humidity is: "+str(humi))

    time.sleep(1)
|
```

Ln: 19 Col: 0

```
